

LET'S START WITH SQL :)

Views In SQL

A view is a virtual table in SQL. It helps in providing a filtered view of data for security purposes.

QUERY:

```
CREATE VIEW viewName AS  
SELECT columns FROM baseTableName; (Specify the columns to be  
included in the view)
```

It helps in Data Abstraction, Security and simplify complex queries.

LET'S START WITH SQL :)

Views In SQL

- To see all the data in view

QUERY:

```
SELECT * FROM viewName ;
```

- To drop a view

QUERY:

```
DROP VIEW IF EXISTS viewName;
```
